

SOLUTIONS FOR ONLINE VENDORS

Online gaming and gambling service providers compete in a crowded industry with an enormous business potential. Being a leading service provider requires not just first class gaming content but also highly capable IT infrastructure, flexible software, back-end software systems and constant alignment with worldwide regulations.

A WORLD CLASS GAMING COMPETENCE CENTER

ComTrade's Gaming Competence Centre is one of the world's top gaming software R&D labs, providing services to a number of leading casino operators. We maintain excellence by demonstrating:

- Thorough understanding of the problems clients face in a highly competitive market
- Wide-ranging and proven knowledge in key areas of gaming and gambling
- Significant experience within worldwide gaming regulations and certifications
- Expertise in multi-vendor platforms, technologies and tools
- Dedication to engineering excellence, with robust technical solutions
- A pool of immense software engineering talent

With a wide range of software engineering solutions, ComTrade delivers expertise across the entire technology stack leveraged by technologies in casino gambling and non-gambling areas.

TYPICAL ENGAGEMENTS

- Product development

Whether it is a requirement, specification, architecture, ongoing support or just from a great idea.

- Additional development power

Allows for the vendor to fill the gap when more development power is needed and/or when specific technology expertise is required.

- Game development and integration

We can implement and integrate into leading gaming platforms any game you design.

- Testing

Regression, UAT, Penetration

BENEFITS

- Increase your competitiveness

We enable you to be more agile and respond quickly to dynamic market demands. We help you build superior products and content based on innovative technology which is an essential component in the race for market leadership.

- Access leading-edge knowledge

We help you overcome the issues related to growth, time-to-market and management of the roadmap when delivering modern casino equipment solutions.

- Accelerate software engineering

We extend your capacity in all key areas of software development and related activities, including software engineering, project management and quality assurance.

REMOTE GAME SERVER BUILDING BLOCK

Remote Game Server is a concept that allows gaming providers to bring their business to a higher level. Additional integration functionalities and support for additional game types is easily and efficiently added to legacy gaming systems. Because we offer a "no lock-in" to a specific vendor, our customers benefit from secured by source code licenses and our Remote Gaming Server is a perfect candidate for primary development platform for game content providers. See Figure 1 on next page.
